

ECE 447

Lesson 18

Signal sampling and reconstruction

UNITED STATES
AIR FORCE
ACADEMY

SCHEDULE AND ADMIN

- [Schedule](#)
- Admin
 - **HW3.** Posted on course website. Due Lesson 20 (Fri, 2 Oct)
 - HW1-2 graded. Labs 2-3 and GR1 will be finished by Friday.

SAMPLING

IDEAL RECONSTRUCTION

NONIDEAL RECONSTRUCTION (INTERPOLATION)

- Interpolation pulse $p(t)$
- $\tilde{g}(t) = p(t) * \bar{g}(t)$
- $\tilde{G}(f) = P(f)\bar{G}(f) = P(f)\frac{1}{T_s} \sum_n G(f - nf_s)$

EQUALIZERS

- $P(f)$ filters sampled signal - need to reverse filtering to obtain original
- Use equalizers!

INTERPOLATOR EXAMPLE - FLAT TOP PULSES

- Also known as a zero-order-hold pulse
- Samples signal and holds that value for T_s

REALIZABLE RECONSTRUCTION FILTERS

- Can't use ideal LPFs
- Need space between samples in spectra

ALIASING

EXAMPLE PROBLEM - 5.1-7
